Appendix 1 Search strategies

Search Methods for Identification of Studies

The standard search of the Cochrane Neonatal Review Group, including electronic searches of the Cochrane central register of controlled trials (CENTRAL, The Cochrane Library), MEDLINE (1966 – to present), EMBASE (1980- to present) and CINAHL (1982 –to present) was used. There was no language restriction applied. The following search terms were applied for each database:

MEDLINE (via PubMed) was searched using the following search strategy:

<table>
